

A PAPERMAKING DEVICE FOR PRODUCING A MULTILAYER LINER  
AND ASSOCIATED METHODS

ABSTRACT OF THE DISCLOSURE

- 5           A method for the production of a liner comprising at least a top layer and a base  
layer is provided, wherein a forming section with at least two forming units is used to  
create a fiber web, said fiber web being conveyed through a press section and further to a  
drying section, said press section comprising a number of roll nips and at least one  
impermeable transfer belt with at least one smooth surface, wherein said transfer belt runs  
10 through the last nip in the press section in such a manner that its top layer is pressed  
against said smooth surface of the transfer belt.
